

Xerox® 9200

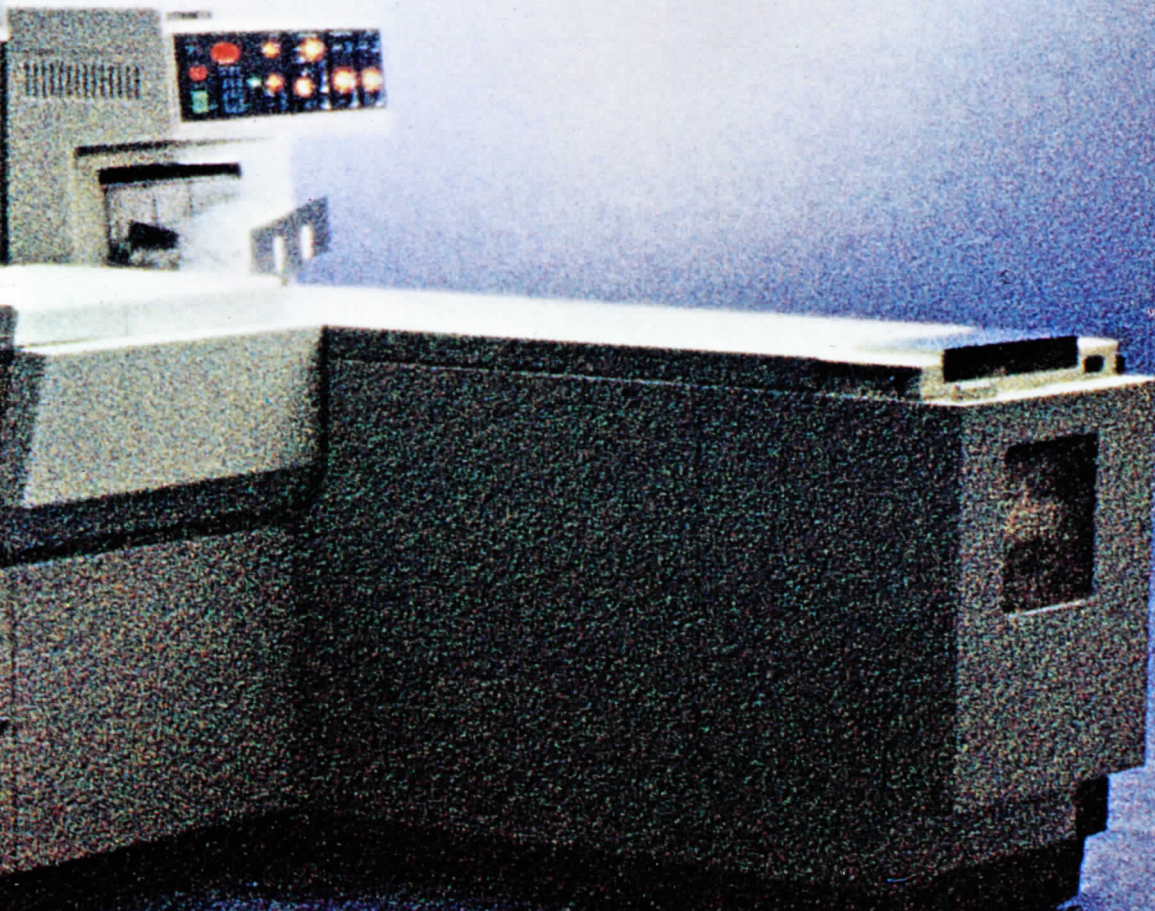

Xerox 9200... the pacemaker

Before the Xerox 9200, equipment was not available to produce collated prints at high speed, directly from many varied originals... automatically.

Before the Xerox 9200 these multi-original sorted jobs were handled by methods that were far from fully efficient, causing serious loss of print room productivity.

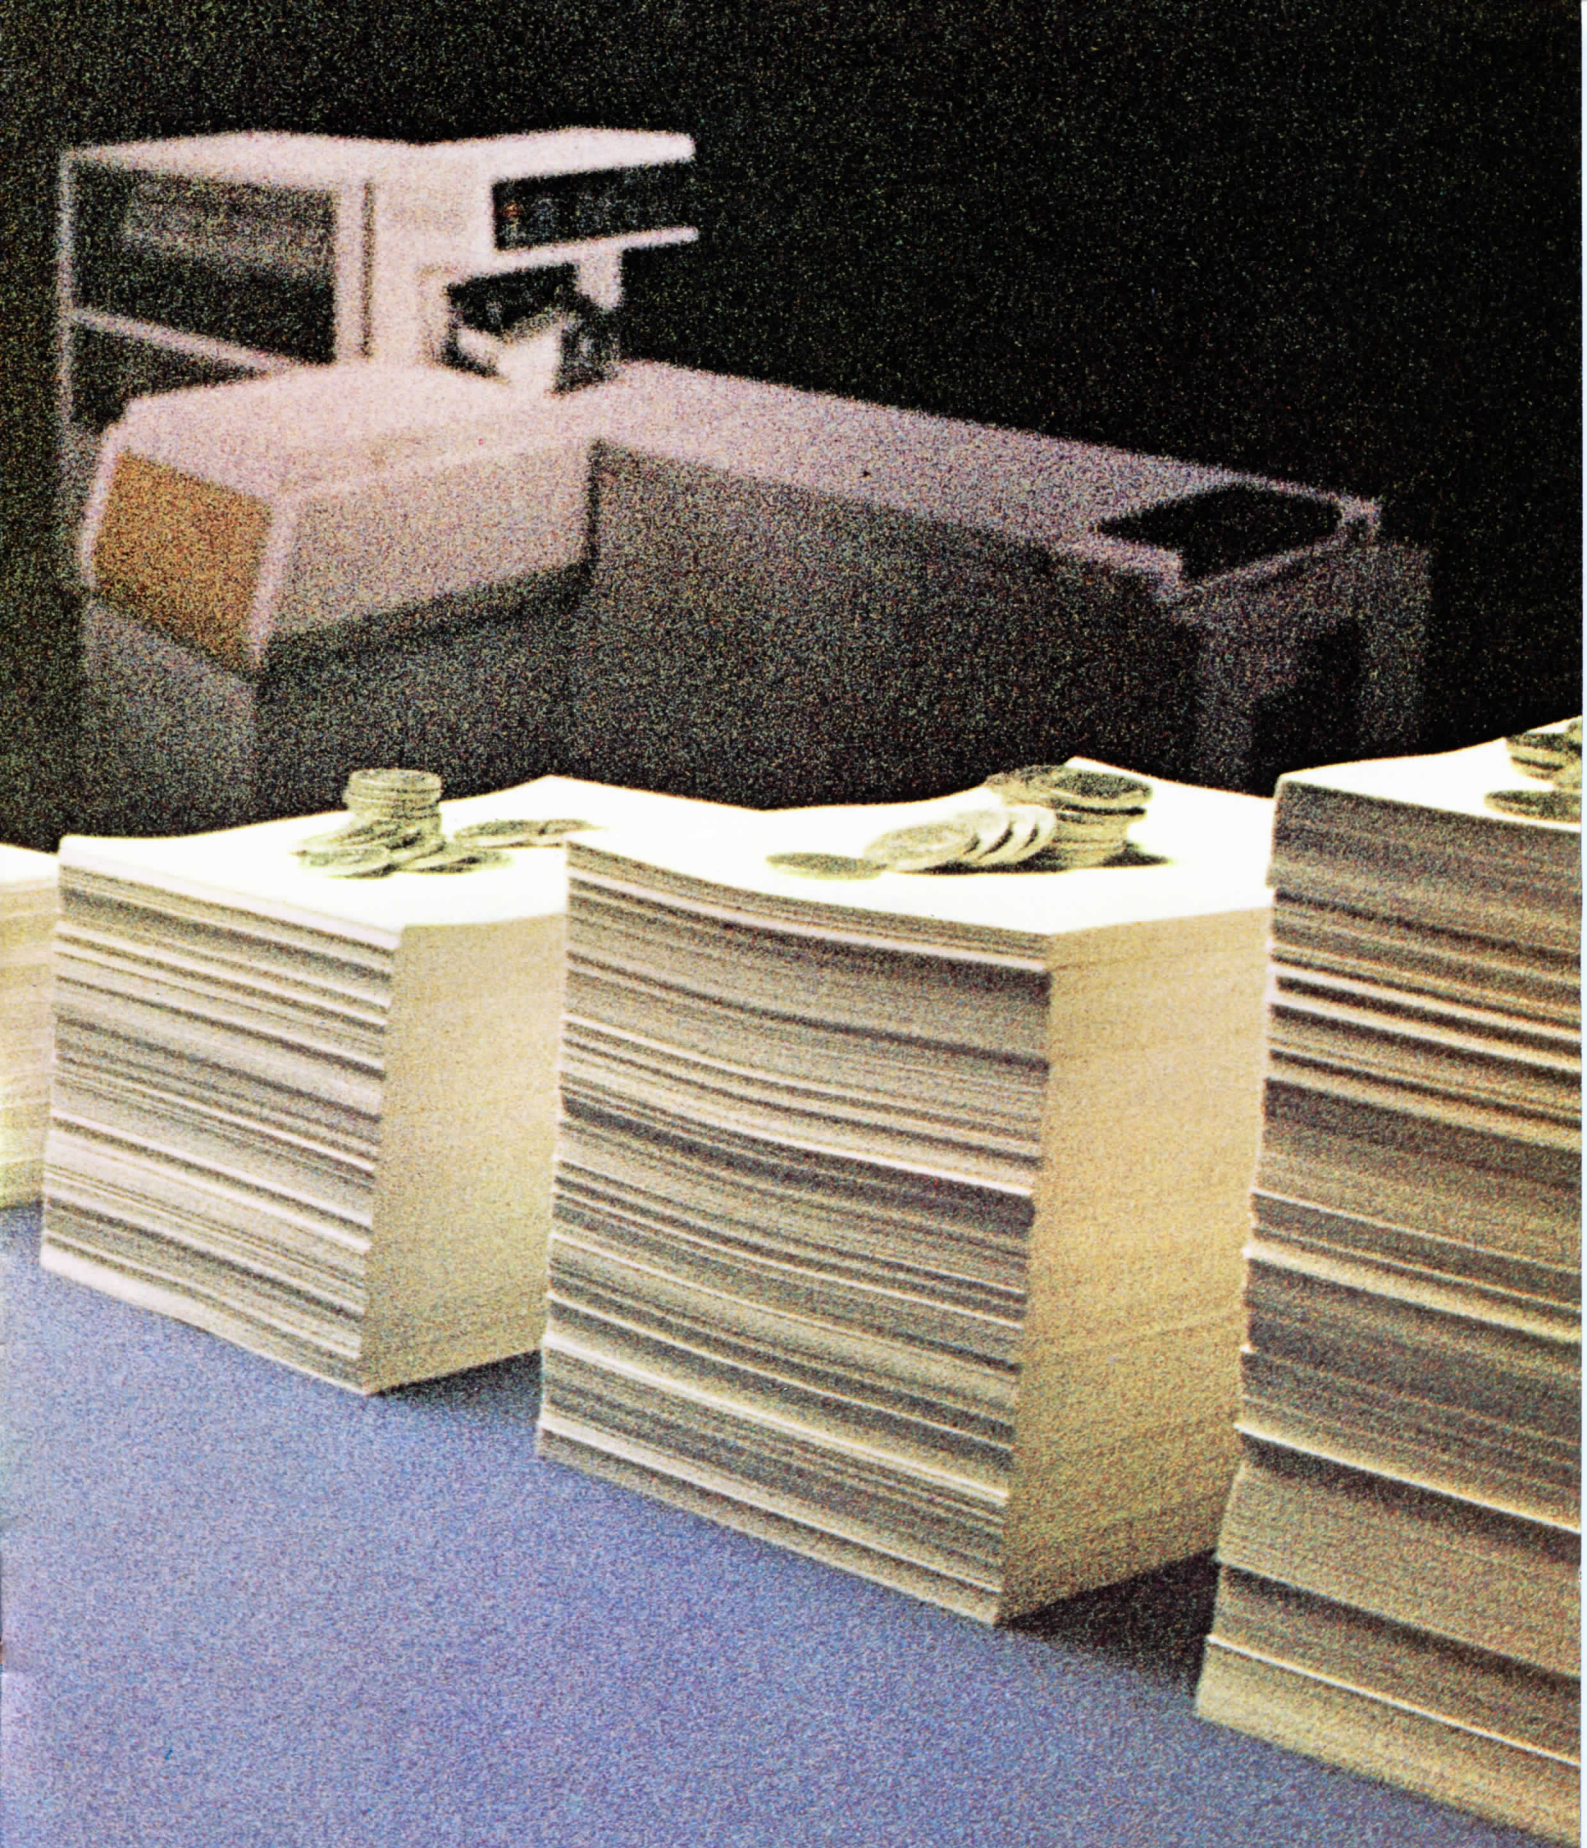

Now the versatile Xerox 9200 can eliminate wasteful procedures and clear the communication bottlenecks. Now, only the Xerox 9200 can form the heart of a really efficient and cost effective communication system.

Xerox 9200 sorts out production costs

In recent years, overall print room costs have far outstripped gains in productivity obtained from existing equipment and techniques.

The Xerox 9200 can redress the balance. This powerful system, with automatic feeding and cycling of originals, a production rate of two prints per second, and 'limitless' sorting, greatly boosts overall productivity in the print room, relieving bottlenecks and increasing peak workload capacity. Furthermore, reliance on costly 'outside' printing can often be reduced, or eliminated altogether!

Now is the time to sort out print production costs. Now is the time to profit from Xerox 9200 productivity.

Xerox 9200 command performance

The Xerox 9200's command centre is its computerised push-button control console. Every aspect of the job, throughout its complete cycle, can be instantly controlled and monitored from this convenient central panel...

programme the run length; pick a paper tray; select a reduction; position the image; compensate for light originals or coloured backgrounds; order the cycle of originals; choose the sorting mode; start the 9200... powerful performance at just a touch.

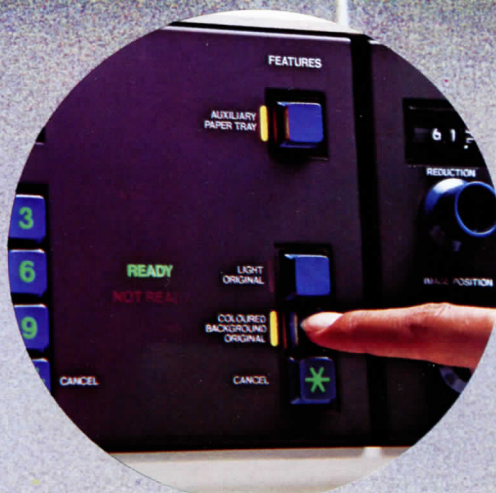

Masterful masterless Xerox 9200

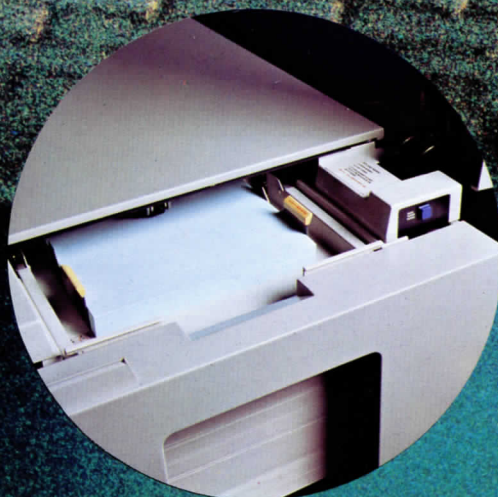

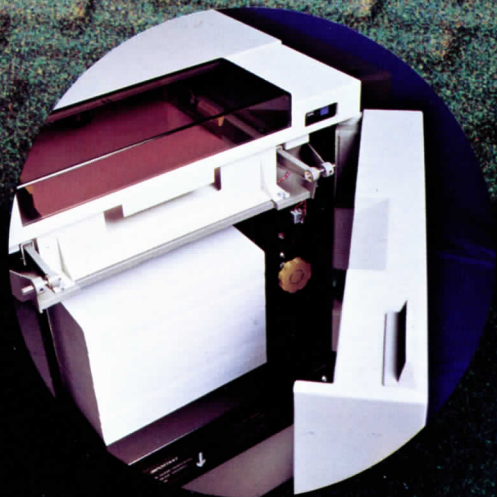

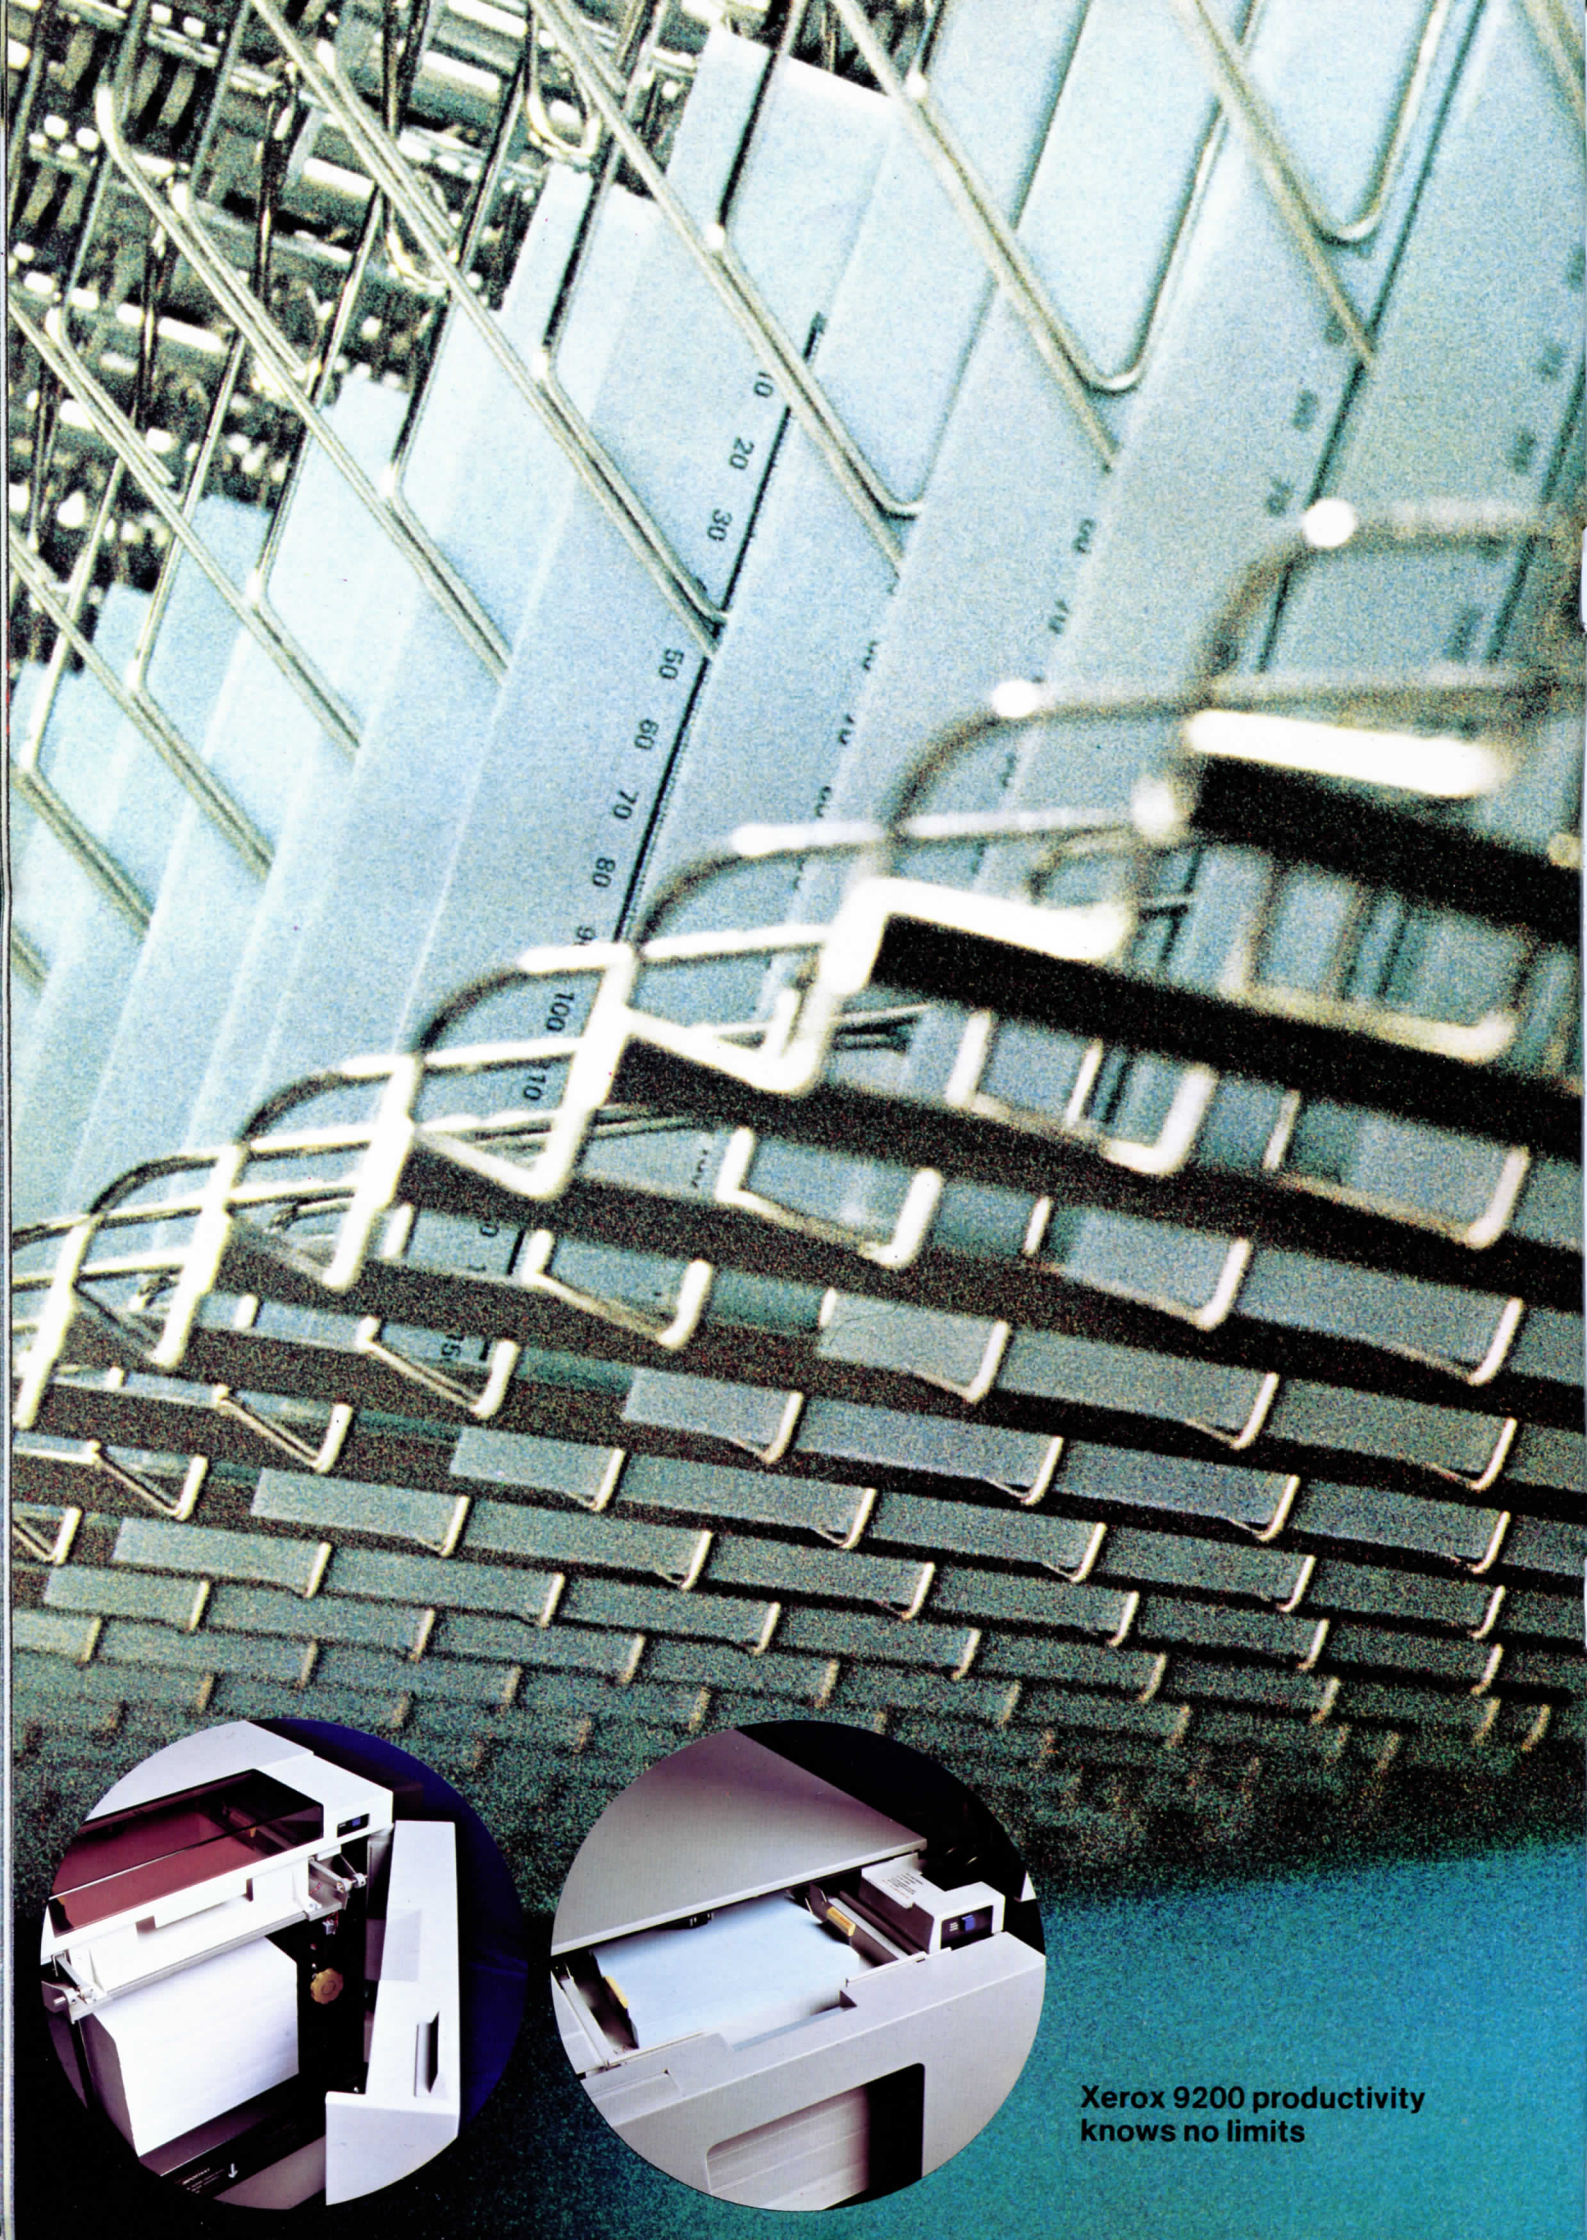

There's no time wasting master making with the Xerox 9200 since xerography works directly from original documents. Up to fifty pages can be placed straight into the automatic document handler. Then the 9200 feeds these one at a time in step with the duplicating process, and returns them in order.

IMAGE REDUCTION

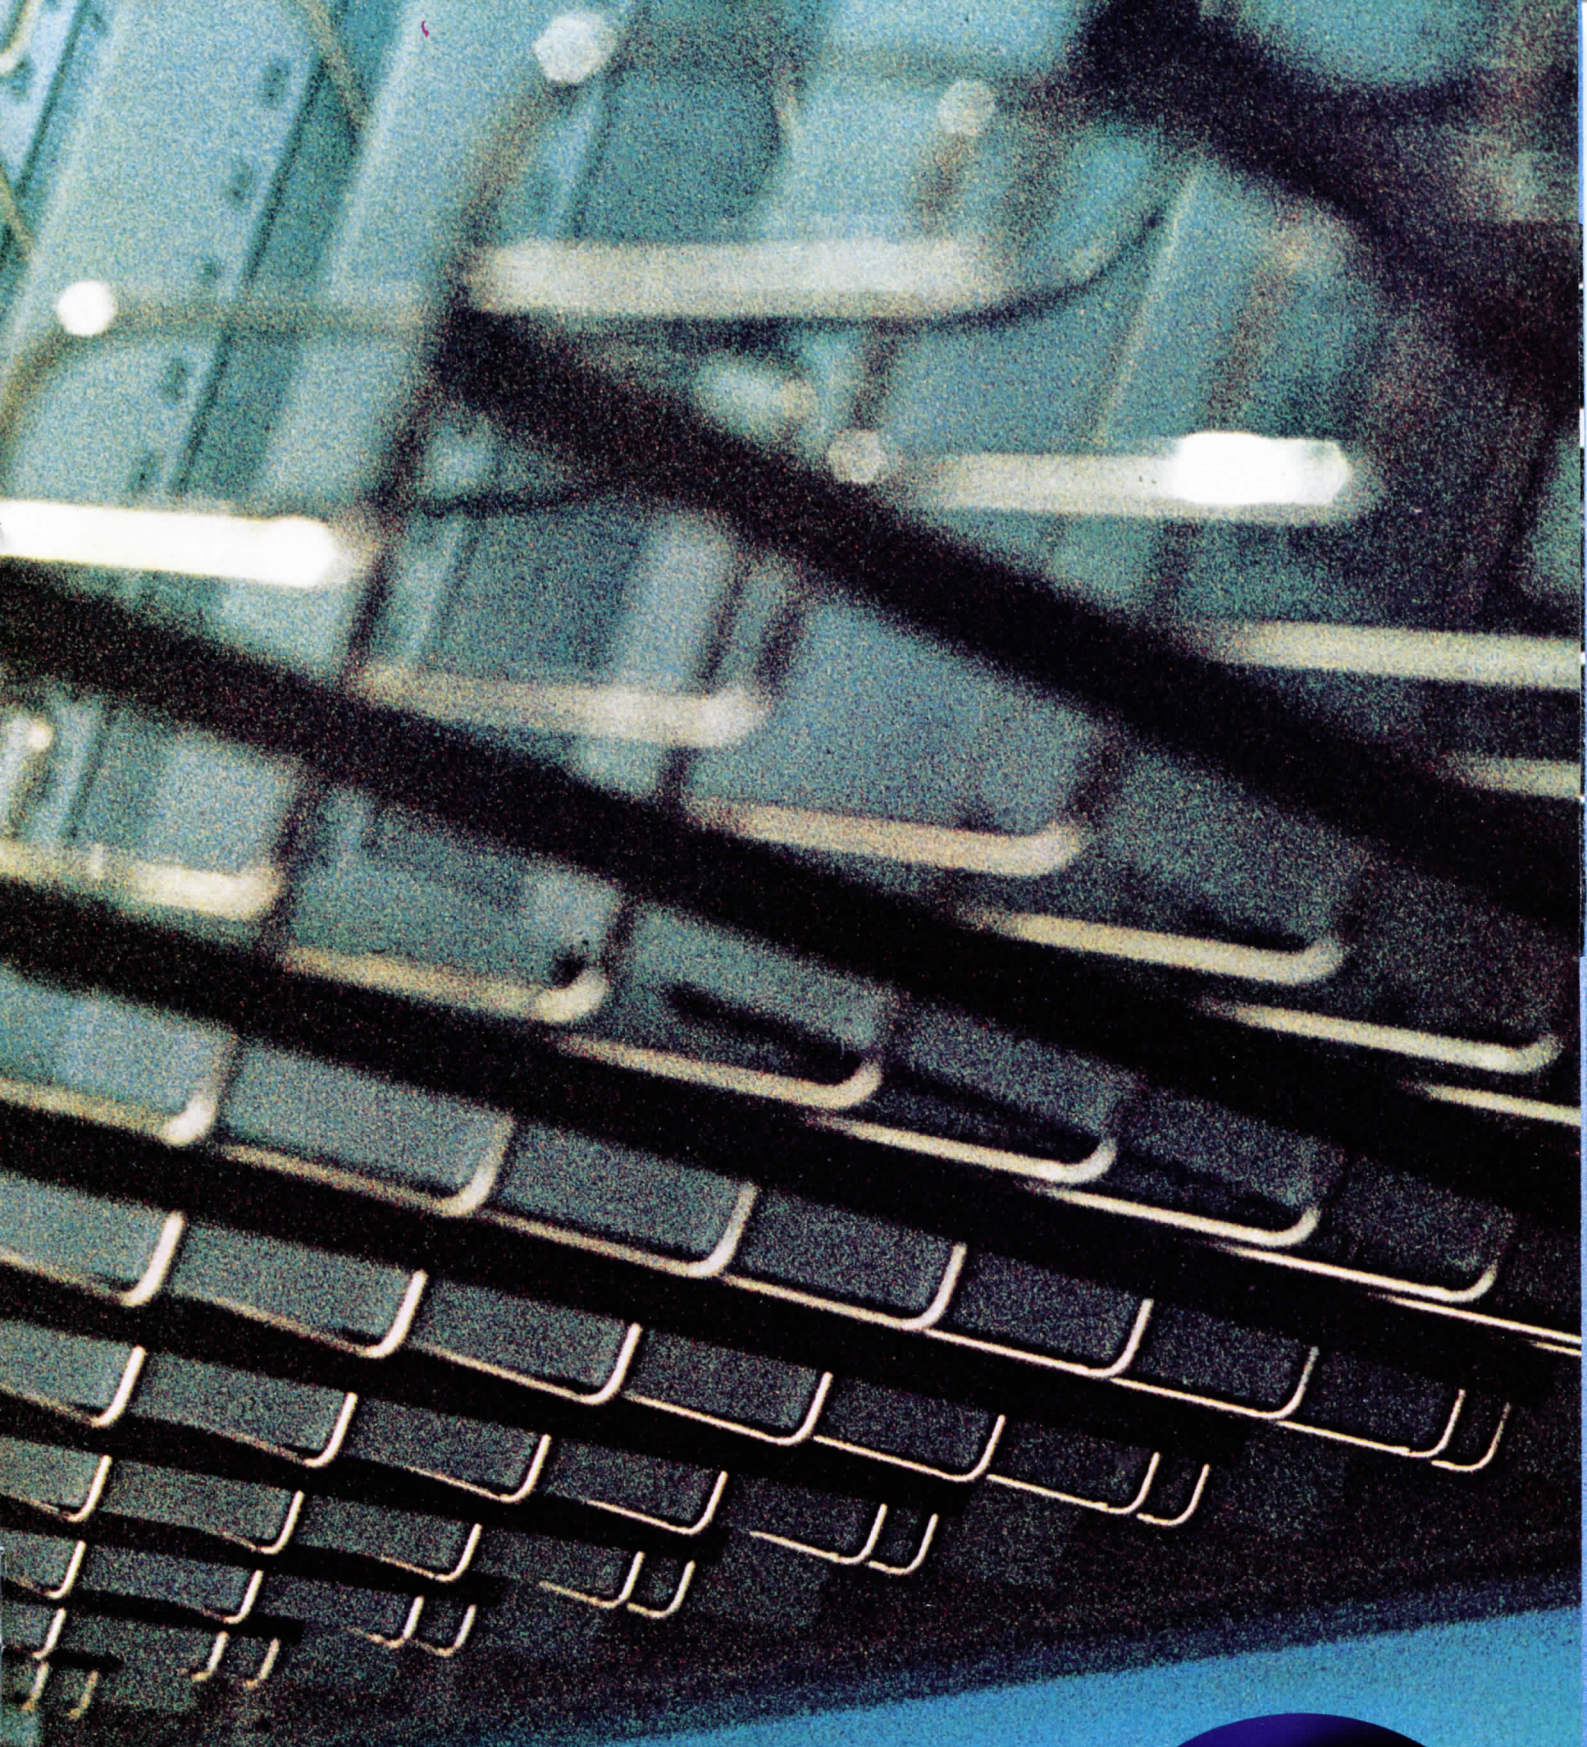

For larger originals, the Xerox 9200 has a built-in zoom lens to scale images to order, from 102% down to 61.5% of the original size. There are also three useful push button ratios, which can be set for frequently used reductions, such as A3 down to A4, or fitting computer print outs on to a handy standard size. There are even buttons to obtain the best print quality from faint originals, and coloured backgrounds.

Xerox 9200... the original system that really masters productivity!

**Xerox 9200 productivity
knows no limits**

From start to finish, the Xerox 9200 is built to boost productivity. Without stopping for adjustment, both paper trays can be loaded with paper from 60-200gsm. One tray can be filled whilst the other is feeding, so there's no production interruption. Even in the middle of a job, at the touch of a button, the versatile auxiliary tray can be made to feed special paper... pre-printed stationery, coloured stock,

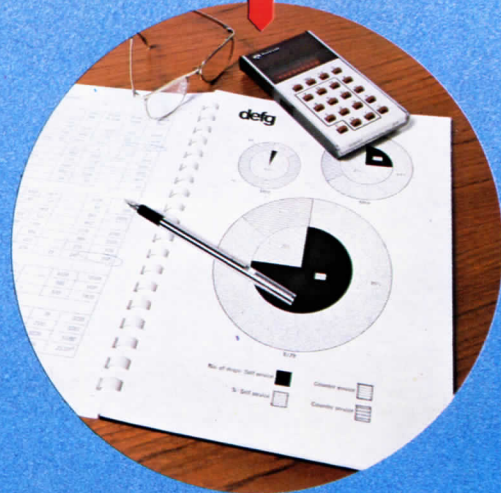

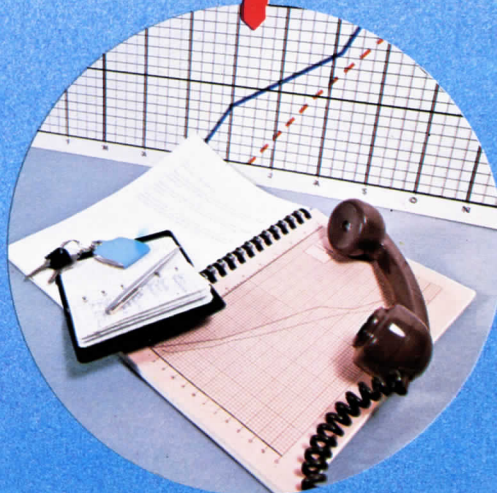

card...or prints that require backing up. Finally, the Xerox 9200 sorts on line, either into sets or stacks. That cuts out all laborious hand collation. One row of sorter bins can be emptied whilst the other is filling, and if the operator cannot keep pace, the Xerox 9200 will pause and then continue automatically. That's limitless sorting. That's productivity!

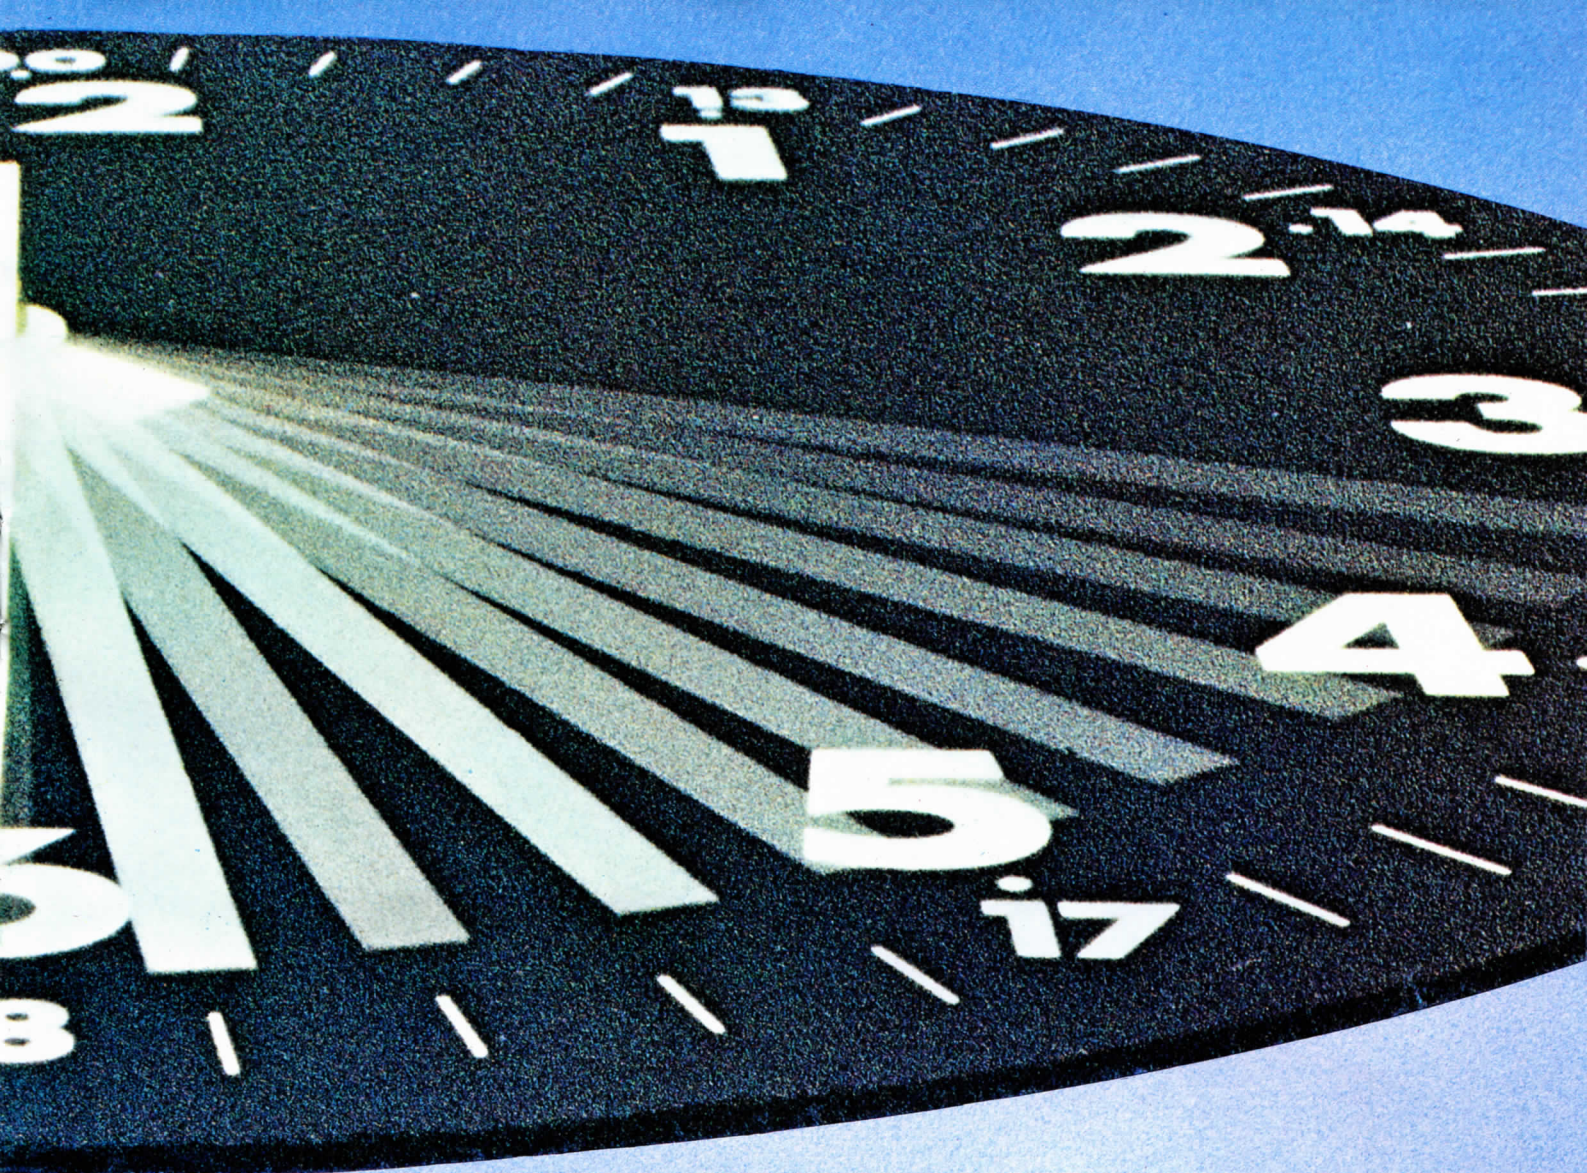

Xerox 9200... the time machine

Successful business today depends largely on prompt decisions based on up-to-the-minute facts and figures. The time taken to produce this information is vitally important to the livelihood of any modern organisation.

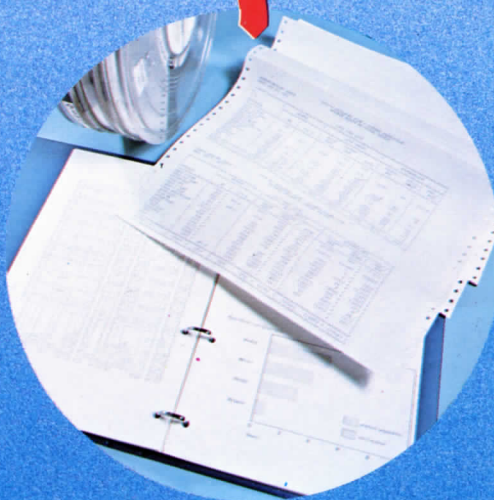

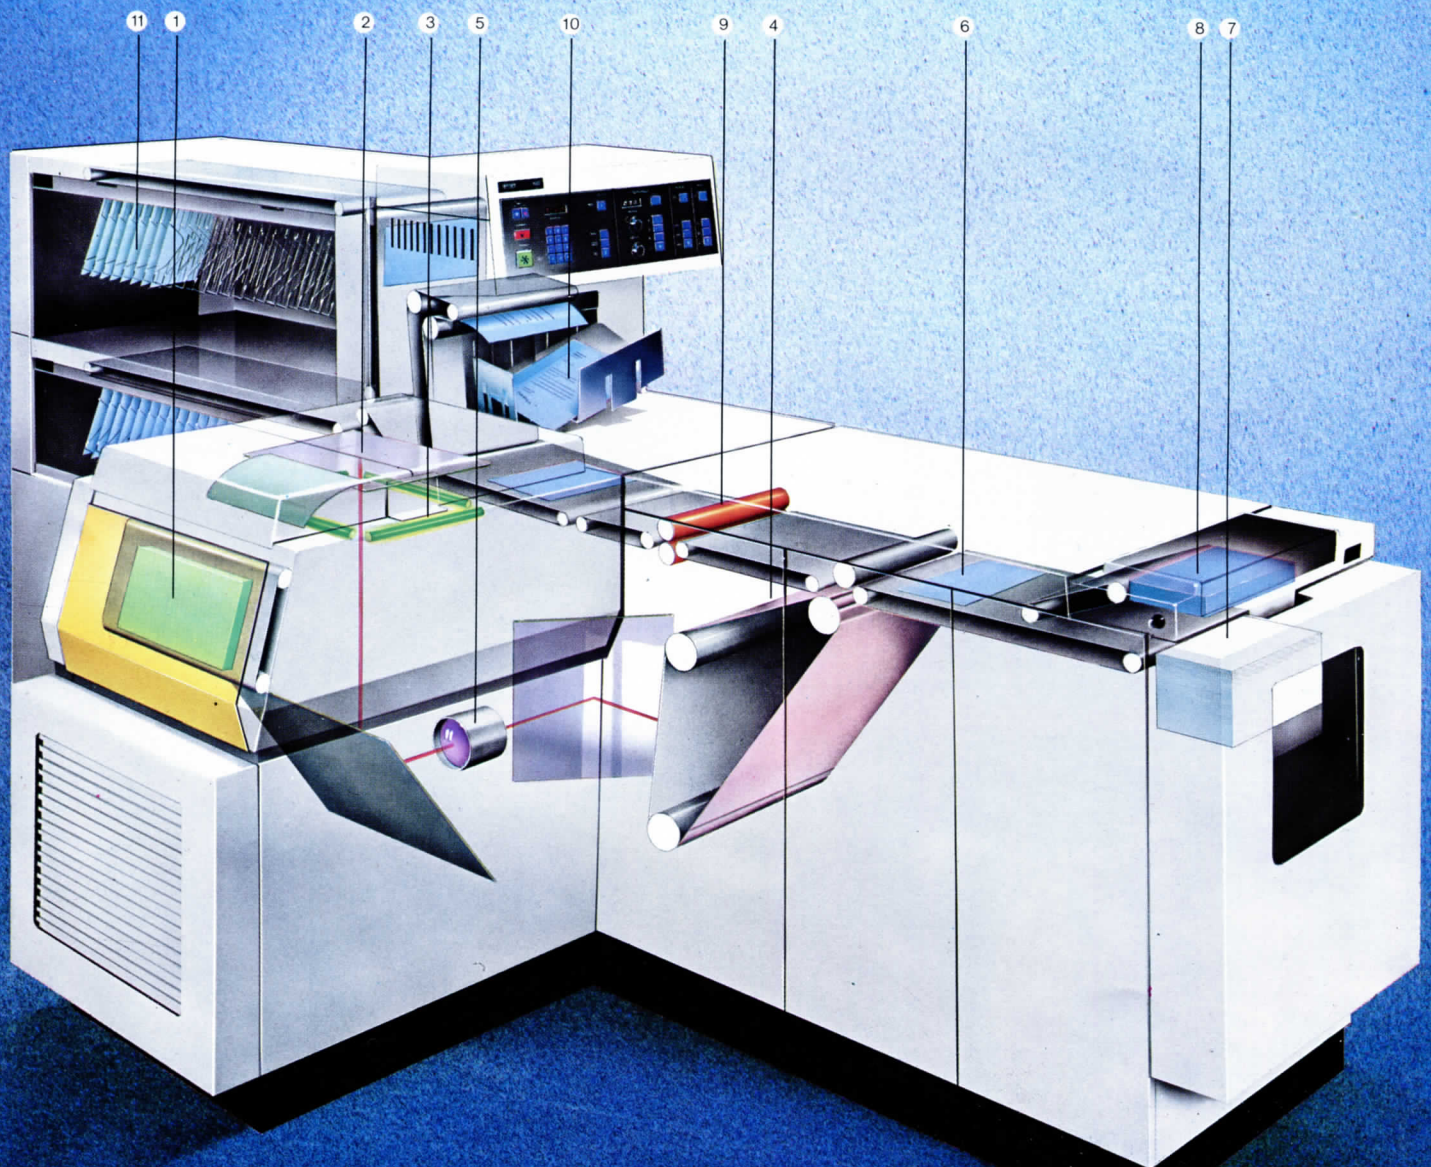

Before the Xerox 9200, reports, manuals, stock controls, schedules and many other collated jobs produced from several originals were frequently delayed by laborious print room processes. First, originals may need reduction. Then plates or masters had to be made. Then machines prepared and run. Then the prints had to be collated—usually by hand, and often by the department that received the job!

This turn around time cost money and wasted opportunities.

Now the Xerox 9200 slashes that time by streamlining print procedures—no more masters! No more hand collation! The Xerox 9200 keeps up the print room pace... automatically!

The automatic document handler ① holds up to fifty documents for automatic feeding and scanning. Alternatively, single originals can be placed on the flat glass platen ②. After exposure to the four flash tubes ③, the image is directed onto the xerographic belt ④, via the zoom lens ⑤, which can adjust the image size from 61.5% to up to 102% of the original size. The xerographic image is then transferred to the paper, which has been fed along the straight paper path ⑥ from either the main paper tray ⑦ or the auxiliary tray ⑧. The image is fused ⑨ permanently to the paper and the finished prints then collect either in the receiving tray ⑩ or are automatically collated into sets or stacks by the 'limitless' on-line sorter ⑪.

Xerox 9200 specifications

Input

The Xerox 9200 reproduces from opaque, translucent or transparent originals. Using the automatic document handler, up to 50 80gsm documents from 203 x 254mm to 216 x 356mm (8 x 10 in to 8½ x 14 in) can be reproduced. The automatic document handler can accept originals of 60 to 200gsm. (80gsm maximum for 365mm (14 in) paper.) Using the manually operated flat platen, the 9200 will take originals of up to 305 x 432mm (12 x 17 in) and it will image from a maximum area of 298 x 432mm (11¾ x 17 in).

Throughput

The sorter will accept prints made on various types of paper ranging from 60 to 200gsm from 203 x 254mm to 216 x 356mm (8 x 10 in to 8½ x 14 in.) Each sorter bin has a capacity of up to 100 80gsm prints. (50 prints at 60gsm.) The output tray holds up to 500 80gsm prints, from 127 x 203mm to 216 x 356mm (5 x 8 in to 8½ x 14 in).

Output

The rate of reproduction is 120 prints per minute (7200 per hour), with a first copy out time of 8 seconds. The machine has an initial warm-up of approximately 5 minutes.

Reduction ratios

In normal use, the Xerox 9200 reproduces at 101.7% of the original size. Using the zoom control, ratios from 102% down to 61.5% of the original can be selected. There are also three push button ratios which can be individually set for frequently used reductions.

Paper trays

The main paper tray holds 2500 sheets, and the auxiliary tray 400 sheets, of 80gsm paper. The Xerox 9200 will accept 60 to 200gsm paper from either tray.

Dimensions

Height: 146.8cm (57¾ in)
Width: 157.5cm (62 in)
Length: 350.5cm (138 in)
Weight: 1315kg (2899 lbs)

Power supply

3 phase/3 wire/50 hz/190-260v in 11.6v steps, or 3 phase/4 wire/340 to 440v in 20v steps. Earth line must be included. Variants ± 2% voltage variants +6% -15%.

Heat output

Standby 4500 btu/hr. Running 2500 btu's per 1000 prints in addition to standby.
